Evaluating TCAS for Multi-view Texture Generation

Control allocation through unseen views and native-UV baked assets

GeoTex controls | 300 objects

Evaluated C3 profile

C3 − Fixed Low

+0.522 dB FG-PSNR

Applied budget is also higher

Matched-budget timing primary

−0.0339 dB

95% interval [−0.1172, +0.0514]

No detected middle-window advantage

Bakes | GeoTex10 + GSO20

Late-high − Fixed Mean, GeoTex Bake10

Δ FG-LPIPS = −0.00265

95% interval [−0.00414, −0.00137]

Small local gain; substantial reference-appearance error remains

Separate GSO Bake20 protocol

Same benefit not detected

Protocols and cohorts remain separate

MV-Adapter | 50 objects

Middle − Fixed Mean, FG-PSNR

+0.029 dB

95% interval [−0.019, +0.081]

Interval includes zero

This separate test does not establish a transferable schedule rule

No middle-window advantage detected

Task-specific evidence; no universal schedule optimum or claim of faithful material recovery
