

MV-Adapter: per-cell FG-LPIPS effects relative to G baseline · N=98

* Per-cell Holm $p < .05$: shallow W3-W5 survive correction. These localized cell effects do not establish a global interaction.
Global checks: cluster-bootstrap $p=0.6523$; exploratory finite-sample Wald $p=0.1012$, four-metric Holm $p=0.3037$.
